

Reduce capital expenses with the 8x8 Flex Rental Hardware Program

The cost of acquiring assets can be a huge burden on an organization. Especially when starting off or opening new locations. The 8x8 Flex Rental Hardware Program gives companies a flexible option to reduce their capital expenditures and get the equipment they need without a cash outlay.

Through the 8x8 Flex Rental Program, companies can rent the most popular and latest Internet Protocol (IP) phones instead of purchasing them upfront. These phones support 8x8 Virtual Office and the full suite of communications and collaboration capabilities. Rental products are brand new and include basic lobby phones, receptionist, Power-Over-Ethernet, Bluetooth, USB, Wi-Fi and conference phones to accommodate your business needs. New models are continually being added.

With Flex, hardware is protected by an industry leading 7-year warranty that covers far more than standard warranties.

You're never locked in with Flex

The 8x8 Flex Rental Hardware Program puts users in charge, by not locking them into a long-term contract. Rentals are month-to-month and offer the ability to upgrade or change models as needed.

This means you'll always have access to the latest technology and never get stuck with an old phone or extra asset on the books.
